Mediator service for MetroCluster and SnapMirror Business Continuity

Install or upgrade the ONTAP Mediator service

To install the ONTAP Mediator service, you must ensure all prerequisites are met, get the installation package and run the installer on the host. This procedure is used for an installation or an upgrade of an existing installation.

About this task

- Beginning with ONTAP 9.7, you can use any version of ONTAP Mediator to monitor a MetroCluster IP configuration.
- Beginning with ONTAP 9.8, you can use any version of ONTAP Mediator to monitor an SM-BC relationship.

Before you begin

You must meet the following prerequisites.

| Mediator version | Supported Linux versions |
|------------------|---|
| 1.5 | Red Hat Enterprise Linux: 7.6, 7.7, 7.8, 7.9, 8.1, 8.2, 8.3, 8.4, 8.5 CentOS: 7.6, 7.7, 7.8, 7.9 |
| 1.4 | Red Hat Enterprise Linux: 7.6, 7.7, 7.8, 7.9, 8.1, 8.2, 8.3, 8.4, 8.5 CentOS: 7.6, 7.7, 7.8, 7.9 |

Upgrade the host operating system and then the Mediator

The following table provides the upgrade guidelines if you are upgrading from RHEL/CentOS 7.6 to a later RHEL/CentOS release in addition upgrading the Mediator version.

| Target Linux | Target Mediator | Upgrade notes |
|--------------|-----------------|---------------|
| version | version | |

| • Red Hat Enterprise Linux: 7.6, 7.7, 7.8, 8.1 | 1.2 | The upgrade must be performed in the following order: a. Upgrade the operating system from RHEL/CentOS version. | | | | |
|---|-----|--|--|--|--|--|

The best practices for installing Red Hat Enterprise Linux or CentOS and the associated repositories on your system are listed below. Systems installed or configured differently might require additional steps.

- You must install Red Hat Enterprise Linux or CentOS according to Red Hat best practices. Due to end-of-life support for CentOS 8.x versions, compatible versions of CentOS 8.x are not recommended.
- While installing the ONTAP Mediator service on Red Hat Enterprise Linux or CentOS, the system must have access to the appropriate repository so that the installation program can access and install all the

required software dependencies.

• For the yum installer to find dependent software in the Red Hat Enterprise Linux repositories, you must have registered the system during the Red Hat Enterprise Linux installation or afterwards by using a valid Red Hat subscription.

See the Red Hat documentation for information about the Red Hat Subscription Manager.

- The following ports must be unused and available for the Mediator:
 - · 31784
 - · 3260
- If using a third-party firewall: refer to Firewall requirements for ONTAP Mediator
- If the Linux host is in a location without access to the internet, you must ensure that the required packages are available in a local repository.

If you are using Link Aggregation Control Protocol (LACP) in a Linux environment, you must correctly configure the kernel and make sure the sysctl net.ipv4.conf.all.arp_ignore is set to "2".

The following packages are required by the ONTAP Mediator service:

| All RHEL/CentOS versions | Additional packages for RHEL/CentOS 7.x | Additional packages for RHEL 8.x |
|--|---|--|
| • openssl | policycoreutils-python | elfutils-libelf-devel |
| openssl-devel | • python36-pip | policycoreutils-python-utils |
| kernel-devel | | |
| • gcc | | |
| libselinux-utils | | |
| • make | | |
| • redhat-lsb-core | | |
| • patch | | |
| • bzip2 | | |
| • python36 | | |
| python36-devel | | |
| • perl-Data-Dumper | | |
| perl-ExtUtils- MakeMaker | | |
| • python3-pip | | |
| | | |

The Mediator installation package is a self-extracting compressed tar file that includes:

- An RPM file containing all dependencies that cannot be obtained from the supported release's repository.
- · An install script.

A valid SSL certification is recommended, as documented in this procedure.

Enable access to the repositories

| If your operating system is | You must provide access to these repositories |
|-----------------------------|--|
| RHEL 7.x | rhel-7-server-optional-rpms |
| CentOS 7.x | C7.6.1810 - Base repository |
| RHEL 8.x | rhel-8-for-x86_64-baseos-rpmsrhel-8-for-x86_64-appstream-rpms |

Enable access to the repositories listed above so Mediator can access the required packages during the installation process. Use the procedure below for your operating system.

- Procedure for RHEL 7.x operating system.
- Procedure for RHEL 8.x operating system.
- Procedure for CentOS 7.x operating system.

The following examples are showing a repository for CentOS 7.6 and may not work for other CentOS versions. Use the base repository for your version of CentOS.

Steps

- 1. Add the C7.6.1810 Base repository. The C7.6.1810 Base vault repository contains the kernel-devel package needed for ONTAP Mediator.
- 2. Add the following lines to /etc/yum.repos.d/CentOS-Vault.repo.

```
[C7.6.1810-base]
name=CentOS-7.6.1810 - Base
baseurl=http://vault.centos.org/7.6.1810/os/$basearch/

Download the Mediator installation package

Steps

1. Download the Mediator installation package from the ONTAP Mediator page.

ONTAP Mediator download page

2. Confirm that the Mediator installation package is in the current working directory:

ls

```
[root@mediator-host ~]#ls ontap-mediator-1.5.0.tgz
```

For ONTAP Mediator versions 1.4 and earlier, the installer is named ontap-mediator.

If you are at a location without access to the internet, you must ensure that the installer has access to the required packages.

3. If necessary, move the Mediator installation package from the download directory to the installation directory on the Linux Mediator host.

4. Unzip the installer package: tar xvfz ontap-mediator-1.5.0.tgz

```
[root@scs000099753 ~]# tar xvfz ontap-mediator-1.5.0.tgz ontap-mediator-1.5.0/
ontap-mediator-1.5.0/ONTAP-Mediator-production.pub

ontap-mediator-1.5.0/ontap-mediator-1.5.0.tsr
ontap-mediator-1.5.0/ontap-mediator-1.5.0.sig
```

Verify the ONTAP Mediator code signature

You should verify the ONTAP Mediator code signature before installing the Mediator installation package.

Before you begin

Before verifying the Mediator code signature, your system must meet the following requirements.

- openssl versions 1.0.2 to 3.0 for basic verification
- openssl version 1.1.0 or later for Time Stamping Authority (TSA) operations
- Public internet access for OCSP verification

The following files are included in the download package:

- ONTAP-Mediator-development.pub | The public key used to verify the signature
- csc-prod-chain-ONTAP-Mediator.pem | The public certification CA chain of trust
- csc-prod-ONTAP-Mediator.pem | The certificate used to generate the key
- ontap-mediator-1.5.0 | The product installation executable for version 1.5.0
- ontap-mediator-1.5.0.sig | The SHA-256 hashed, then RSA-signed using the csc-prod key, signature for the installer
- ontap-mediator-1.5.0.sig.tsr | The revocation request for use by OCSCP for the installer's signature
- tsa-prod-ONTAP-Mediator.pem | The public certificate for the TSR
- tsa-prod-chain-ONTAP-Mediator.pem | The public certificate CA Chain for the TSR

Steps

- 1. Perform the revocation check on csc-prod-ONTAP-Mediator.pem by using Online Certificate Status Protocol (OCSP).
 - a. Find the OCSP URL used to register the certificate as developer certificates might not provide a uri.

openssl x509 -noout -ocsp_uri -in csc-prod-chain-ONTAP-Mediator.pem

b. Generate an OCSP request for the certificate.

openssl ocsp -issuer csc-prod-chain-ONTAP-Mediator.pem -CAfile csc-prod-chain-ONTAP-Mediator.pem -cert csc-prod-ONTAP-Mediator.pem -reqout req.der

c. Connect to the OCSP Manager to send the OCSP request: openssl

openssl ocsp -issuer csc-prod-chain-ONTAP-Mediator.pem -CAfile cscprod-chain-ONTAP-Mediator.pem -cert csc-prod-ONTAP-Mediator.pem -url \${ocsp_uri} -resp_text -respout resp.der

2. Verify the trust chain of the CSC and expiration dates against the local host: openssl verify

The openssl version from the PATH must have a valid cert.pem (not self-signed).

openssl verify -untrusted csc-prod-chain-ONTAP-Mediator.pem -CApath \${OPENSSLDIR} csc-prod-ONTAP-Mediator.pem # Failure action: The Code-Signature-Check certificate has expired or is invalid. Download a newer version of the ONTAP Mediator.

openssl verify -untrusted tsa-prod-chain-ONTAP-Mediator.pem -CApath \${OPENSSLDIR} tsa-prod-ONTAP-Mediator.pem # Failure action: The Time-Stamp certificate has expired or is invalid. Download a newer version of the ONTAP Mediator.

3. Verify the ontap-mediator-1.5.0.sig.tsr and ontap-mediator-1.5.0.tsr files using the associated certificates: openssl ts -verify

.tsr files contain the time stamp response associated with the installer and the code signature. Processing confirms that the time stamp has a valid signature from TSA and that your input file has not changed. The verification is performed locally on your machine. Independently, there is no need to access TSA servers.

openssl ts -verify -data ontap-mediator-1.5.0.sig -in ontap-mediator-1.5.0.sig.tsr -CAfile tsa-prod-chain-ONTAP-Mediator.pem -untrusted tsa-prod-ONTAP-Mediator.pem

openssl ts -verify -data ontap-mediator-1.5.0 -in ontap-mediator-1.5.0.tsr -CAfile tsa-prod-chain-ONTAP-Mediator.pem -untrusted tsa-prod-ONTAP-Mediator.pem

4. Verify signatures against the key: openssl -dgst -verify

openssl dgst -sha256 -verify ONTAP-Mediator-production.pub -signature ontap-mediator-1.5.0.sig ontap-mediator-1.5.0

```

Install the ONTAP Mediator installation package

About this task

- Beginning with ONTAP Mediator 1.4, the Secure Boot mechanism is enabled on UEFI systems. When Secure Boot is enabled, you must take additional steps to register the security key after installation:
 - Follow instructions in the README file: /opt/netapp/lib/ontap_mediator/ontap_mediator/SCST_mod_keys/README.module-signing to sign the SCST kernel module.
 - Locate the required keys: /opt/netapp/lib/ontap mediator/ontap mediator/SCST mod keys

After installation, the README files and key location are also provided in the system output.

Steps

1. Run the installer and respond to the prompts as required: ./ontap-mediator-1.5.0/ontap-mediator-1.5.0 -y

```
[\verb|root@scs000099753| ~] \# ./ontap-mediator-1.5.0/ontap-mediator-1.5.0| -y
```

The installation process proceeds to create the required accounts and install required packages. If you have a previous version of Mediator installed on the host, you will be prompted to confirm that you want to upgrade.

```
[root@scs000099753 ~]# ./ontap-mediator-1.5.0/ontap-mediator-1.5.0 -y
